

competition

This month's winners are certainly in for a treat. We've got two Goldstar monitors to give away: the 17in 1727 model, and the 15in multimedia 56m. What's more, three lucky runners-up will each receive a Goldstar 8-speed CD-Rom drive

The lucky winner of August's competition will receive a 17in Goldstar 1727 monitor. Second prize is the 1727's multimedia cousin, the 15in Goldstar 56m. The runners-up will each win a Goldstar 8-speed CD-Rom drive – it's a top-quality drive, about the size of a portable CD player.

First prize

The 1727 monitor is part of Goldstar's high-resolution range. Both the 1727 and 56m have been designed to outlast the rest of your PC hardware, with a number of features that set new standards in monitor design.

What PC? reviewed the 1727 monitor in February; we liked the simple, uncluttered design, large screen diagonal, and user-friendly controls. There is on-screen adjustment for brightness and contrast (just like your TV), as well as conventional dials. The 1727 has the size and clarity you need for desktop publishing – you can actually see what you're doing on a 17in screen, rather than squinting at a 14in one. Both of these monitors have overscan: this system gives you edge-to-edge image – no black borders!

Second prize

Our second prize, the Goldstar 56m, is part of Goldstar's 'Studioworks' range. It has full multimedia capability, with integrated stereo amplifier and speakers – making separate speakers obsolete – and a high-resolution screen to ensure sharp, vivid images. There are built-in microphone and headphone sockets, so you can add your own choice of music or, alternatively, enjoy games without disturbing others. The monitor is also totally Windows 95 plug-and-play compatible.

The 56m has many of the fea-

tures of the 1727, including on-screen adjustment for image, colour and sound, and the same overscan technology to fill your screen with the image. Both monitors have power management systems to minimise energy consumption.

Runners-up

Three lucky runners-up will win Goldstar's 8-speed CD-Rom drive, the GCD-R580B. This drive has an ultra-compact internal design that will fit in with the rest of your PC hardware, and would complement any multimedia system. It delivers a 'super fast' 1200Kb per second, with access time of just 150ms. It has a buffer memory of 256Kb and is one of the fastest drives available.

How to win

Simply answer these questions, and complete the tie-breaker which follows.

- 1 How big is the screen on the Goldstar 1727 monitor?
- 2 The 56m is part of which Goldstar range of monitors?
- 3 What is the access time of the Goldstar GCD-R580B CD-Rom drive?
