(54) Information processing apparatus, method and computer program for virtual reality transparent avatars

(57) The present invention provides an information processing apparatus, an information processing method and presentation medium. The information processing apparatus according to the present invention for presenting a 3-dimensional virtual space allowing an avatar being operated to communicate with other avatars includes a storage means for storing an indicator set to show whether or not information owned by the avatar

can be communicated with the other avatars, and a judgment means for forming a judgment as to whether or not information owned by the avatar can be communicated with the other avatars on the basis of the indicator stored in the storage means. As a result, a plurality of clients are allowed to experience a 3-dimensional virtual space without substantially increasing the amount of processing of the system and the amount of communication on a transmission line.

FIG. 1
