Telnet Client Main Screen

The Telnet Client Main Screen can be divided into two parts, the one made up by the menu and the buttons bar, and the one made up by the console where the program displays the Telnet protocol information given by the server.

This client, not only supports the Telnet protocol, but also supports the VT100 terminal emulation that most Telnet servers implement over the Telnet level, and that is used to set up some advanced cursor and configuration options.

The Telnet client is a simple program that is very easy to use and that is similar to the default Windows Telnet application with some little differences (it supports Bold, Underscore and Inverse video font types). In the program, the options are divided into four menus:

Telnet Session Menu
Edit Menu
Miscellaneous Menu
Help Menu

Telnet session Menu

     This menu includes all the functions related to the connection and the Telnet session, ad they are also available through the buttons bar. It has the next functions:

[Telnet Site Manager](#)
[Quick Connection](#)
[Logout](#)
[Last Hosts Visited](#)
[Close](#)

Telnet Site Manager

This option shows a Telnet server manager, that lets you order the servers in a tree mode using folders and servers, and letting you add/delete, and change servers and information about them. The information that can be saved in this form is: Host Name, Host Address, Port, Login, Password, Login Type, and Comments. Of course, you can establish a connection to any of the Telnet servers that you enter in this Site manager.

Quick Connection

Besides the <u>Telnet site manager</u>, another option is available to establish a connection to a Telnet server. This is the Quick Connection, and it displays a form where the connection information has to be entered (Host Address, Port and if it needs local echo).

Logout

This option lets you close the session with the current Telnet Server.

Last Hosts Visited

This option includes a submenu where the address of the last Telnet servers (hosts) visited is displayed. A connection to any of them can be made just selecting it.

Close

This option closes the Telnet client window (and the current session if applicable).

Telnet Client

The Telnet Client lets you open a remote session to a host. It opens a console window that lets you connect to the Telnet server.

The Telnet client is divided in two parts: the first one includes the menu and the toolbar, and the second one includes the console window. You can open a session to a remote host using either the Quick Connection or the Telnet Site Manager option.

This Telnet Client, supports VT100 terminal emulation (including font attributes like bold, inverse video, etc).

Edit Menu

This menu includes all the functions related to the edition of the text displayed in the console. These functions are:

Copy
Copy Current Line
Paste
Erase Line

Copy

This option copies the contents of the current screen to the Windows Wallpaper so the user can use it with other programs.

Copy Current Line

This option copies the contents of all the current line (the one where the cursor is situated) to the Windows Wallpaper so the user can use it with other programs.

Paste

This option 'pastes' the contents of the Windows Wallpaper, sending the data to the Telnet server to which the program is connected.

Erase Line

This option sends the Telnet code (that is part of the protocol) called EL, that means 'Erase Line', and deletes all the current line.

Miscellaneous Menu

This menu includes some general functions of the Telnet Client. These functions are:

Options
Print Screen
Save Screen to File
Open Log File
Close Log File

Options

This function shows a window where the Telnet client configuration parameters can be modified. This window is divided in two pages. The first one called 'Colors and Settings' includes the visual parameters like the terminal color and the font type, and the second one (Telnet) includes the Telnet protocol configuration parameters (Local Echo and Telnet Port).

Clicking in the button 'Defaults', sets the parameters to the default value (set up by the program).

Print Screen

This option prints the contents of the current terminal screen.

Save Screen to File

This option saves the contents of the current screen to a text file, so the user can use it with other applications.

Open Log File

This function opens a Log file. This means that since that moment on, and until the function 'Close Log File' is called, all the data sent by the server and displayed in the screen will be saved in a text file.

Close Log File

This function closes the Log File opened previously with the function 'Open Log File'.

Register

Shuttle FTP Suite is a Shareware program. This means that if you like it after you have tried it or you are going to use it for commercial purposes, you must **register it**. I have put a lot of hard work to develop this Internet multi client, and I need money to continue developing new versions of this program. Registering a shareware program will make you a happier person and will increase your spirit because you will be doing the right thing.

There are two ways of registering Shuttle FTP Suite:

a.-) Online Registration via Internet. You can visit Shuttle FTP Suite website at http://www.waveflow.com/shuttleftp/ and follow the instructions, or you can directly select   Help Menu   Register   Online Registration.

b.-) Sending a letter with the money (a little fee of 25 US$) and the <u>Registration Form</u> to:

Xavier Cirac
c\ Batlles , 4
Premia de Mar , 08330
Barcelona
SPAIN

After receiving your registration mail, I will e-mail/mail you with your registration login and password so you can enter them to the program.

If you need multiple licenses of Shuttle FTP Suite, you will have a very special discounts:

1 license: 25 US$
5-10 licenses : 23 US$ (8%)
10-15 licenses: 21 US$ (16%)
>15 licenses: 18 US$ (28%)

Thanks for registering Shuttle FTP Suite.

<u>Registration Form</u>

Registration Form

        Please Print the next form and fill in the information (if applicable) when you send me the registration letter:

Product: Shuttle FTP Suite 2.x
Company: _____
Name: _____
E-Mail: _____
Address: _____
City: _____
State/Province: _____
Country: _____

Optional

Where did you find Shuttle FTP Suite?
_____

What are you using Shuttle FTP Suite for?
_____

Help Menu

This menu includes all the functions for the user support. This includes:

Contents: Displays this help file.
Register: Gives you information about the program registration.
About...: General Information of the program.
Visit Shuttle FTP Suite website: Direct connection to the Shuttle FTP Suite Web Site, where you can find and download the last version and find some information about it.
