WEBPAINTER™ 3

WebPainter's hallmark ease-of-use and unique cel animation process creates the smallest, high-quality GIF animation, QuickTime™ movies, JPEGs and GIF files in the fewest possible steps. By combining bitmap and vector graphic tools, sophisticated image layering features, SMPTE special effects, auto-transitions, image filters, and powerful export and optimization features, you can quickly create professional animation and graphics for your corporate or personal Web site.

Key Features:

- Produce and optimize bitmapped and vector animation and graphics in a single tool
- Include a rich set of vector and bitmapped tools in a robust editing environment
- Use multiple image layering capabilities for sophisticated image control
- Create animations and banners in just a few steps using auto-transitions and SMPTE special effects
- Model traditional cel animation using powerful onion-skinning features
- Produce the most compact GIF animation and graphics in the fewest steps
- Import/export to popular file formats such as Animated GIF, GIF, JPEG, Photoshop™, PICT, PNG QuickTime™ movie
- Fast editing and storage of objects with the Vector Image Library
- Support QuickTime filters such as blur, emboss, sharpen and more

Includes:

- Animation library of over 1000 animation files
- GiffyView utility to preview GIF files at different data rates
- Concise PDF manual and tutorials
- Upgrade to Apple™ QuickTime™ 3 Pro

System Requirements:

Macintosh

- Power Macintosh, Mac OS v7.1 or later
- 8MB RAM, 15MB Disk (min.)

Windows 95/98/NT

- Pentium 120 MHZ or higher processor with SVGA Monitor and 1 MB of VRAM
- 32MB or RAM
- 20MB of Hard Disk

Apple QuickTime 3.0

(QuickTime™ 4 Pro included)

Windows ® 95/98/NT
