DEBABELIZER®
THE GRAPHICS PROCESSING TOOLBOX™

Now Includes ProScripts™ - Essential for your
Web Page Creation

▶ DeBabelizer can automatically process and translate any currently supported RGB bit-mapped graphics to GIF, JPEG, or PNG - the most commonly used formats for the Web. The GIF format can be saved as interlaced, non-interlaced, interlaced with transparency or non-interlaced with transparency.

Interlaced GIF / Progressive JPEG ....for a fade-in effect
Interlaced GIF w/transparency ....for images w/transparent backgrounds
JPEG ....compressed for speedier display and downloading
PNG (Portable Network Graphics) ....important new Web format
Now saves to flattened QuickTime™ ....to view in Windows 3x and Windows '95 Web browsers

▶ DeBabelizer will automatically remap any number of images or animation files to one optimal color palette via it's SuperPalette™ technology, allowing faster display without any palette shifting, regardless of whether you are displaying them through a Mac or Windows-based platform.

▶ ***Now available on our Website (www.equilibrium.com) & the latest version of DeBabelizer Toolbox*** **-**
Equilibrium makes it even easier to process images for the Web by providing several pre-made ProScripts™ that you can import into your DeBabelizer Toolbox program and customize to fit your needs. Input your original images, and these four essential Web graphic preparation scripts will provide you with the following options:

WebSaveToTNail - 120x120 thumbnails saved as non-interlaced GIFs with a common 8-bit palette, optimized for use on both Mac and Windows platforms
WebSaveToGif - Interlaced GIF images at their original size with a common 8-bit palette, optimized for use on both Mac and Windows platforms
WebSaveToJPEG - JPEG images at their original size
WebSaveToAll - Will accomplish all of the above

> *"We have 250,000 subscribers, and we use DeBabelizer*
> *for literally every image that we put up on the Web."*
