

REEL-EYES™

Looking beyond the beyond...

Reel-Eyes™ Data Sheet

"iREZ ReelEyes™" allows you to watch and capture audio and video either to RAM or to your Hard Disk. You can also set up a fixed size cropped area of the video display window and grab only that portion in your movie. The software can also playback movies, do simple cut/copy/pastes/trim edits and save the selected portion of a clip as a self contained movie, Export a movie using different compression methods and add Time Codes to Movies.

For people using **QuickTime 4 or higher**, you can now record to multiple hard drives or partitions so that when the first - primary hard drive is nearly full, QuickTime will switch to a second hard drive and continue recording to that. Additionally, you can also have the Audio recorded to another hard drive, making it possible to have your AV recording session done to 3 hard drives at the same time (i.e. video recorded to 2 hard drives so that the second one will be used when the first is nearly full and the audio to a slower hard drive).

It can also play low data rate movies (like Midi) in the background too.

Lastly, we added **Apple Script support** so that you can use Apple Scripts to control ReelEyes™.

System Requirements:
Apple Power Macintosh with an Audio/Video interface.
Mac OS 8.5.1 or Higher.
32 Megabytes of memory available for application.
Hard Drive with 2 Gigabytes of storage space.

Warranty:

90 days from the date of purchase. The warranty will be extended to a total of one (1) year upon on-line registration of Reel-Eyes at our web-site at: <http://www.irez.com>
