Keywords: This, That, Other

Usage Commentary

[Give a concise description of the device, its features, and the functionality provided under NeXTSTEP. Present only facts and avoid personal biases.]

[Left-justify paragraphs and separate them with a blank line. Be careful to make sure you format the text such that information is not lost when converting to plain ASCII. (e.g. set columns that need to be aligned in a non-proportional font.)]

Setup and Installation

[Present all necessary procedures for setting up and installing the item. If there is reason to believe that the item is supported only in certain configurations (e.g. Certified Systems), a snapshot of the supported system should also be listed here. This would include (for an EISA PC) all ECU settings, BIOS settings, ROM and firmware revisions, etc.]

Known Problems

- This is the correct format for these entries. One bullet for each known problem.

    Problem descriptions requiring multiple paragraphs should be indented with a tab like this.
