Updated Release of the ODBCEOAdaptor (v13.2)

This patch fixes two problems:
73072   ODBC cannot save custom classes
73239   EOAdaptors: EOModeler can't reverse engineer from databases with spaces in column names or
            table names

In order to install this patch, you will need to use gzip and gnutar to expand the attachment. You'll end up with a supplemental NextLibrary directory, which you can then copy into your existing NextLibrary directory. The patch will replace NextLibrary\Executables\ODBCEOAdaptor.dll and the entire NextLibrary\Frameworks\ODBCEOAdaptor.framework directory, so you should take care to create a back up these items before installing over the top of them.

This patch is version number 13.2. The FCS ODBC Adaptor shipped with the EOF 2.0 release was version 13.1. You can find the version of the ODBC adaptor in the title of the ODBC Login panel.

Here is the cookbook approach once you have "odbc_patch.tar.gz" on c:/tmp
    $ cd $NEXT_ROOT
    $ mv NextLibrary/Executables/ODBCEOAdaptor.dll NextLibrary/Executables/ODBCEOAdaptor.dll.bak
    $ mv NextLibrary/Frameworks/ODBCEOAdaptor.framework

NextLibrary/Frameworks/ODBCEOAdaptor.framework.bak
$ gzip -d -c c:/tmp/odbc_patch.tar.gz | gnutar -xvf -

      ODBCEOAdaptor.dll.gz ¬
odbc_patch.tar.gz
