Title: Using EOF with PDO

Keywords: EOF PDO adaptor 100005

Q. Using EOF 1.1 and PDO 3.0, I build a trivial app to retrieve some data.   The code compiles and links without warnings, but when I execute the code it dies with: #100005.   Further examination reveals that the adaptor cannot be accessed.

A. One solution is to statically link in the adaptor, i.e.:

% gcc -g -o myProg myProg.o **/usr/NextLibrary/Adaptors/Oracle7.dbadaptor/Oracle7** -lEOAccess -lFoundation -lm
