Background

Live Wire!™ is a fast and furious action puzzle game that combines a winning formula of exceptional graphics with the most exciting and addictive gameplay possible. This game has all the ingredients of a Number 1 best seller.

The Game

With high quality graphics, incredibly vibrant colours, and a unique futuristic look, Live Wire!™ is set to take the Game Boy Color by storm.

Play takes place on grid lines, the “Live Wires”. Players navigate their way around the Live Wires changing the colours as they go. When all the edges of a square are covered, the space inside flips over forming a solid square tinted in the player’s colour.

The player competes against the computer for territory in the form of these filled squares. Once all are filled in or time out occurs the largest number of filled squares strikes a win point and play progresses to the next level. Using bonuses dotted around the landscape, a player or computer can change the colour of the filled cells to their own or simply blow them out of the water, quickly reversing a winning or losing situation.

Each level is populated by many unusual characters that endeavour to make life increasingly more difficult for the player. Traps, blockades and other hindrances also exist to challenge the player and act as hooks to advance the addiction level of the game. Enemies can also be used to the player’s advantage – strategy is key!

Features

- 50 levels to conquer
- 5 different themed worlds to explore
- Loads of enemies to use, abuse and terminate
- Numerous bonuses and pick-ups to fight for
- Stunning vibrant graphics
