HTBdisp.DLL

DLL LOAD "HTBdisp"

DLL GET "VOID HTBdisp:Display"

Display(char*, int = 1)

This function places the contents of the character string on the screen with its location dependent on the second parameter.

Parameter 1
      Basic Type: STRING
      C Type: char *

This parameter holds the value that is to be printed to the HTBasic screen.

Parameter 2
      Basic Type: INTEGER
      C Type: int

This parameter specifies the location where the string will be printed. Any non-zero value will send output to the DISP line. A zero value will output the text to the message line. This parameter is optional. Default behavior is to place the text on the DISP line.
