

RIPspace

Version 2.5

By Jonathan Carroll

Introduction

Welcome to RipSPACE for Windows & Windows NT, Version 2.5. This is the latest release of a utility that will analyze disk space usage-- conveniently providing you with an overview of the space various directories are consuming. In addition to being able to customize these reports by specifying font, file types to track, and sort order, you may print or save the report when it's complete.

RipSPACE performs its analysis quietly "in the background" so that you can carry on with work in another application.

Please be sure to go through the introductory sections in the online help file. The next section in this document will outline the steps necessary to install RipSPACE on your system.

New In This Version

Please see the online help titled *New In This Version* for more information.

Where to go from here

RipSPACE is easy to use, but you should read through the help file once to get a feel for what the program does, and how it does it.

So what does it cost?

RipSPACE is shareware. The version you have in your hands is a complete working version. There are no annoying reminder screens about what it costs, and there are no disabled features. If however, you find this application useful and you use it regularly, I'd appreciate the modest sum of \$15. If you don't think RipSPACE is worth \$15, send me mail (or email) and tell me why-- perhaps your suggestions will be incorporated in a future version.

To make things easy, you may now register RipSPACE via CompuServe by typing **GO SWREG** at any prompt and searching with the keyword **RIPSPACE**.

Installation

Windows Users

Installation is easy. Place **RIPSPC16.EXE** and **RIPSPACE.HLP** in a directory of their own-- and enjoy. You can add RipSPACE to your Program Manager (or Norton Desktop etc.). You're ready to run!

Windows NT Users

Installation is easy. Place **RIPSPC32.EXE** and **RIPSPACE.HLP** in a directory of their own-- and enjoy. You can add RipSPACE to your Program Manager (or Norton Desktop etc.). You're ready to run!

Where to find me

If you try / use RipSPACE, I'd like to hear what you think. There are four ways to get ahold of me :

Conventional Mail
