

TPD System
Supplementary Information
6/17/88

Installation

This diskette contains one system software file called 'TPD System'. This file replaces the two files described in your manual. This single file contains the software necessary to activate the features of your Radius Two Page Display (TPD).

To install the Radius System Software,

- Drag the file 'TPD System' into the System Folder

- Restart your computer

'TPD System'

'TPD System' is an INIT/cdev file that enables you to tear off menus and sub-menus from within applications, choose an alternate point size for your menu font, set the time delay for the Screen Saver, and use the magnifier feature. If this file is not present in your System Folder at the time of startup, the features will not be activated, although the display will still function properly.

'TPD System' also allows you to control the TPD features from within the Apple Control Panel. Assuming the file is present in the System Folder at the time of startup, choosing 'Control Panel' under the Apple menu will reveal a Radius icon in the left side of the Control Panel. Clicking on this icon will bring up the Radius Control Panel.

Radius Accelerator

If you also have a Radius Accelerator, you should have the Radius file 'Accelerator' (version 2.5 or higher) in your System Folder. Your Radius dealer can get this file for you. If you have any questions, contact your Radius authorized dealer or Radius Customer Support at (408) 434-1010.

All previous versions of Radius Display Software (including 'Radius Update') should be taken out of your System Folder.

As with any System Software change, there is a possibility of incompatibility with uncommon or newly released applications that escape our testing procedures. If you experience problems, please follow the Troubleshooting guidelines described below.

CloseView

The CloseView utility supplied with Apple's System release 6.0 is not compatible with your TPD. It will cause no harm in your System Folder, but you will not be able to activate its features.

Troubleshooting

The Radius TPD offers a variety of advanced features designed to make you more productive. You may at times wish to disable these features to ensure the highest level of software compatibility.

If, by chance, you encounter any compatibility difficulties with your TPD, the following troubleshooting steps will help isolate and remedy the problem quickly:

- Make sure you are using a recent version of Apple's System and Finder and update it if necessary. Radius System Software will be updated as Apple updates its System Software.
- Make sure you are using the latest released version of your application. Check with the software vendor or your dealer.
- Check to see if you have any unusual INIT files in your System Folder or any unusual Desk Accessories. Try removing them and restarting your computer.
- Turn off all the TPD features from the Control Panel and restart your computer. Deactivating Radius features may provide greater compatibility.
- Finally, remove all Radius files from your System Folder and restart your computer. This will eliminate any incompatibility that could be caused by the Radius System Software.

If the problem persists, please call your Radius Authorized Dealer, the software vendor, or Radius Customer Support at (408) 434-1010.

Please return your registration card (found in your manual) so we can provide you with product updates. We hope you enjoy your Radius Display!
