

Radius Accelerator System Software Disk

Installation Notes

.....(Release B).....

Radius Accelerator System Software, which includes the “Radius SANE” file and the Radius “Accelerator” file, improves compatibility and enables your system to make use of Radius’ special features. Please install these two files in the System Folder of the startup disk whenever you use Radius Accelerator products.

The following table shows current Radius Accelerator Products, their respective ROM versions and the current System Software.

	Accelerator 16 (<u>Macintosh Plus</u>)	Accelerator 16 (<u>Macintosh SE</u>)	Accelerator 25 (<u>Macintosh SE</u>)
ROM:	v1.8	v1.8, v2.0	v2.0
Software:	Accelerator (v2.5) SANE (v1.2)	Accelerator (v2.5) SANE (v1.2)	Accelerator (v2.5) SANE (v1.2)

Radius Accelerator File

The Radius “Accelerator” INIT file supports operation of Radius Accelerators with Apple System Tools 5.0 (System 4.2, Finder 6.0, MultiFinder 1.0) and Apple System Tools 6.0 (System 6.0, Finder 6.1, MultiFinder 6.0). The Accelerator file also improves sound quality for most applications that use the Macintosh sound drivers.

To install the Radius “Accelerator” file:

COPY the file into the System Folder by dragging it and select RESTART under the SPECIAL menu. (The Radius “Accelerator” INIT file must be on the same level as the System and Finder files during startup.)

Radius SANE File

Some applications will automatically look for and use an available coprocessor. Most applications, however, will need the Radius SANE INIT file to direct floating point operations to the 68881. Note: This file is only for those users who have a Radius Accelerator with a 68881 coprocessor. Refer to the Radius SANE Tech Note (included on this disk) for more detailed information.

Like the Radius “Accelerator” file, the SANE file needs to be present in the startup System Folder when booting.

COPY the "Radius SANE" file into the System Folder and select RESTART under the SPECIAL menu. The file requires 8K of disk space. (The "Radius SANE" file must be on the same level as the System and Finder files during startup.)

Accelerators and Radius Displays

If you are using a Radius Full Page Display or a Radius Two Page Display with your Accelerator, be sure to install the appropriate System Software, v2.5 or greater. If you already own a Radius Display and have software installed, you should call your Dealer or Radius Customer Support for information on the current Radius Software. Older versions of Radius System Software should be removed from your system folder, including:

Update	(v1.0)
Radius TPD	(v1.0)
TPD Features	(v1.0)

Final Note

We will gladly answer any questions regarding the Radius System Software. Please call your Radius Authorized Dealer or Radius Customer Support at (408) 434-1010.
