

PreVue Preloader

The PREVUE Preloader will preload required DLLs and VBX files and keep it in memory. This has an effect of increasing PREVUE startup by as much as 300%.

If you did not install the PREVUE Preloader in your StartUp Window Group simply run the setup installation again and click the **YES** button when prompted for installing the PREVUE PreLoader.

Since the PREVUE Preloader keeps required DLL and VBX files in memory you may want to close it if you are running out of memory or system resources. Simply double click on it's icon and click the *Close* button.

If you want to remove the PREVUE Preloader from your StartUp Window Group

1. From the Program Manager, open the StartUp Window Group.
2. Highlight the PREVUE Preloader icon by clicking on it once.
3. Select "File-Delete" from Program Manager's menu or press the "Del" key.
