SoundBlaster8 Audio Driver

This driver is for 8-bit Sound Blaster compatible
series cards. It will work with Sound Blaster
Classic, Sound Blaster 2.0 and Sound Blaster Pro
cards.

The range of sampling rates is limited by hardware
capabilities of these cards. However some clone
cards may not be able support higher rates.

	Playback	**Recording**
Classic	4-23 KHz	4-13 KHz

| **2.0** | 4-44.1 KHz | 4-15 KHz |
| **Pro** | 4-44.1 KHz | 4-44.1 KHz |

Also note that the Pro card can playback in stereo
but only upto 22KHz.

Playback of compressed sound files is not supported.

You should make sure that DMA/IRQ/Port Address
selected using Configure is same as the one defined
by the jumpers on the sound card. Refer to the
hardware documentation for available jumpers and how
to set them.
