0b815f5f84012584067f411b312d37OneVision: Document ± Open

## Open Document

844747\_paste.tiff ↗

This command opens an existing document. Clicking this command opens the File Viewer, where you can choose the document you wish to open.

In the left, lower part of the file selection panel some document information are shown, such as the OneVision version with which the document has been created, the height and width of the document pages, the number of pages, masterpages and elements, who modified it the last time and with what version. If you don't have Read permission for the document, no information is displayed. If you don't have Write permission a little lock appears in the upper left corner.

In the right, lower part you can see the preview section for displaying preview pages that have been generated when saving the document. You define whether to create previews when saving documents in the <Document Preferences>  
(;../Info/Preferences.rtf;Dokument;↗).

556038\_paste.tiff ↗

*Figure: The Preview section of the Open Document panel*

If no previews have been included when saving the document, the option <No Preview> is selected and the other options are disabled.

If preview images are available in the document, they can be displayed selecting one of the given options. When opting for *<All Pages>*, a scroll bar is shown that enables you to scroll through the pages. For directly accessing a particular page, you can enter its page number in the given entry field.

The selected document will be opened when you double-click it or click the *<OK>* button. If you click the *<Cancel>* button, the command will be canceled.

You can load a document faster by clicking on it in the main file viewer. Loadable OneVision documents can be recognized by the suffix "1VDoc".

If OneVision has not been started yet (indicated by three dots in its icon), clicking a document will start the program.
