b815f5f84012584067f411b312d37OneVision: Page ± Move

Move Page(s)

885442_paste.tiff ↵497476_paste.tiff ↵

This command allows you to move one or more pages anywhere within the document.

When you click *<Move>* when working on document pages, the *Move Page(s)* panel will appear:

279225_paste.tiff ↵*Figure: The Move Page(s) panel, demonstrating the command to move all the pages numbered 5 to 10 to a new position following page 97.*

When you are working on masterpages, you can move masterpages:

paste.tiff ↵*Figure: The Move Masterpage(s) panel*

You enter the numbers of the first and the last page you want to move in the first two text fields.

The switch *<after/before>* allows you to choose whether the pages you want to move should be inserted after or before the page whose number you enter in the text field at the right. If you want to move pages so that they appear after the current last page, you can type *</>* (for last). *<f>* (for first) will do the same for the first page.

Note: The destination page may not lay between the pages you want to move.

Clicking the <OK> button, will start moving the pages. If you click the <Cancel> button, no pages will be moved.

Note: If you have defined and assigned masterpages for even and odd pages, moving an odd number of pages can cause a loss of data, in the case that you have modified reference elements on the documentpages
