Close Window

115412_paste.tiff ↵

If you don't need a document anymore, you can close it by closing its window. Closing a window completely removes it from the screen, unlike simply miniaturizing a window.

If the cross in the close button of the window is broken, the document has been modified but hasn't been saved yet.

587209_paste.tiff ↵

Figure: Close button of a saved document.

885150_paste.tiff ↵

Figure: Close button of an unsaved document.

As soon as the changes in a document are saved, the cross in the close button will be restored. If you try to close a document that hasn't been saved yet, the following attention panel will appear:

paste.tiff ↵Figure: Attention panel for closing documents.

If you click *<Cancel>*, the document will not be closed and will remain on the screen. Clicking *<No>* will close the document without saving it. Selecting *<Save>* will save the changed document before closing it.
