0b815f5f84012584067f411b312d37OneVision-Type: Styles

TextStyleTool.tiff ↗ Styles

Using predefined styles for formatting text makes it easy to manage documents, especially when format changes have to be consistent throughout a document. Styles always affect whole paragraphs and they contain all the settings available in the *Paragraph Formats* and the *Character Attributes* panel of OneVision-Type. You can also include tab lists, set language preferences, and define hyphenation rules.

The following chapters describes Styles tool in full detail.
