0b815f5f84012584067f411b312d37OneVision-Type: Tab List

## Tab List

This panel can be opened by double-clicking on the ruler of an OneVision-Type element or by clicking the command *<Tabs>* in the *Style Settings* panel. Existing tabs are listed in the selection list, and you can create, modify or remove different types of tabs.

*Figure: The Tab List panel showing four tab entries*

## Type

From this pop-up list you can select one of the four tab types supported by OneVision-Type:

- Flush-left
- Flush-right
- Centered
- Decimal

## Position

This parameter displays the position of the currently selected tab, as measured from the left edge of the element frame. You can change the position by entering a new value and clicking the *<Modify>* command.

## Decimal Character

If you are using decimal tabs, you can define in this field the character you want to use as the decimal point.

## Leader Character

This field allows you to specify a character that will be used for filling the empty space of the current tab.

## New

After you've defined a tab with the settings above, clicking <New> adds the tab to the list. If a tab already exists at this position, an error message will appear. The minimum distance between two tabs must be greater than 0.25 DTPpoint (=0.003€Inch).

## Modify

If you want to modify a tab, select it from the list and change its settings. Clicking <Modify> will alter the tab according to your new specifications.

## Remove

You can remove a tab from the list by selecting it and clicking the <Remove> button.

After you've finished editing all your tabs, click <OK> to put them into effect for the ruler. Clicking <Cancel> will discard all your changes.

If you are working on a style sheet, all setting you make in this panel will only become valid after you've clicked <OK> in the *Style Settings* panel (;Einstellungen.rtf;;↵) for registering your style.
