## **Developer Kit for OneVision**

OneVision is a modular publishing environment, open to every developer.

Software developers may enhance the OneVision software package without being concerned with screen output or other peripheral devices. Because of the open architecture of the operating system shell, links and tools can be developed as enhancements to the existing VISIONlinks, or even as additional applications and tools. "Mission critical applications" for special application areas can be programmed in an uncommonly fast and elegant way.

### **How to become a OneVision developer**

Simply contact OneVision GmbH and provide a description of your project.
