## Underline

paste.tiff ↵

The *<Underline>* command causes text to appear with an underline.

This command applies to selected text or to the text in which the cursor is positioned. Applying the *<Underline>* command to text that is already underlined will remove the underline.

The weight and position of the underline can be controlled in OneVision-Type's *Character Attributes* panel (see <Underline Parameters>  
;../../../../DTPElement/OVSelCharTool.rtf;Unterstrich;¬).
