Windows

The *Windows* menu lists commands for manipulating windows.

paste.tiff ↵

Figure: The menu for manipulating windows.

Window Name

798032_paste.tiff ↵

The command `<WindowName>` brings the window or document with the same name to the front of the screen. The cross in front of the name, resembling a close button, indicates whether the document has been changed since it was opened. If it has been changed, the cross is broken.

If the document is closed when this switch is clicked, it will be opened and positioned in front of all other windows on the screen. This command is useful when you have a lot of documents open at the same time.
