Conversion

icon_JustifiedTextTool1.tiff ↦ OneVision-Type to Pathtext Conversion

This tool is used for converting the content of a OneVision-Type text frame to Pathtext elements.

Select the text frame whose content you want to convert and click the *<Convert to Pathtext>* command. Each text line will be converted to a Pathtext element and the text frame will be deleted.

The created Pathtext elements can be processed with the Pathtext tool (`;/../JustifiedText/JustifiedText.rfd;;↦`).

Only text lines that are visible in the selected text frame are converted. Any text outside the frame is ignored. You can only convert single text frame. The convert button is disabled, if multiple frames are selected.

If the converted text frame belonged to a sequence of piped frames, its content is kept copying it to the previous or next frame. This is the default behavior if a text frame is deleted that has been piped.
