Licensing OneVision and Modules

615782_paste.tiff ¬

You can make as many copies of OneVision and its modules as you wish. You can also make copies from installed programs.

Each copy of OneVision or its modules runs in a demonstration mode, which limits its use in certain ways. For example, you will not be able to save documents made with a demonstration copy of OneVision, and saved documents may not load completely. Please read the section about <Limitations of Demonstration Versions> (;Licensing.rtfd;Demoversion;¬) very carefully.

Demonstration versions or versions containing unlicensed modules are announced by the following panel:

paste.tiff ¬Figure: Panel, announcing that unlicensed modules have been loaded.

In order to get a full working version of OneVision, you must purchase a user's license or a test license. Your confirmation of ownership of a user's license is the key number that you enter in the

panel that appears when you click <*Licensing*> in the *Info* submenu of OneVision's main menu .

The scroll list in the upper portion of the *Licensing* panel shows which modules have currently been installed on your system but are not yet licensed.   New entries will be added to this windows when you load new demonstration versions of other modules that have not yet been licensed.

454638_paste.tiff ¬*Figure: Portion of the Licensing Panel listing unlicensed modules.*

For licensing OneVision and OneVision modules you need a *Key€String*. You get your *Key String* for licensing OneVision from your OneVision distributor or from OneVision GmbH. You will need to supply the *Code String* shown in the *Licensing* panel.

Send Licenseform;¬markervonBogenInfo;¬Sending a License Form to OneVision
License forms for licensing OneVision and OneVision modules can automatically be written in the *Licensing* panel.

Select the modules you want to license from the list <*Modules to License*> in the lower part of the *Licensing* panel.

When you have finished your selection click the button <*Send License Form*> and a panel will be opened in which you have to enter your address. You are required to fill in at least the first four address fields so that your request can be handled correctly.

Figure: Panel for entering your data for sending a license form to OneVision.

From the pull-down list <*Send License Form to OneVision per*> you can choose how to send the license form to OneVision GmbH. The following commands are available:

- Letter
- Fax
- Electronic Mail

Depending on your choice, a further panel will be opened displaying a sample text which includes the address of OneVision GmbH, a list of the modules you have selected for licensing and the *Code String* that is required for licensing. Though you are free to edit the text in this panel you shouldn't change those statements.

Clicking the <*Send*> command either sends your order directly to OneVision GmbH if you have chosen the <*Electronic Mail*> command, or opens the NEXTSTEP *Print* or *Fax* panel for further

processing.

License with your personal *Key String*
After you have sent for a OneVision license you will receive your
personal *Key String.* Just enter this string in the field <*Key€String*>
in the *Licensing* panel and click the <*License*> command. The newly
licensed modules are now available and fully working.

Note: The numbers 0 and 1 are   not used neither within the
CodeString nor the *Key String* to avoid confusing them with the
characters O and I.

Make sure, before applying for a *KeyString*, that you have started
OneVision on the correct NEXTSTEP   system and that you have
logged in with the correct name. Both will be considered when
computing the *Key String*   from the *Code€String*. A licensed version
of OneVision is bound to a registered user, who may log in to it from
any computer on the network.

Note: If you have acquired a time limited license and afterwards
purchased a full license while your time limited license is still valid,
the time limited license will take precedence of the full license until
its expiration date.

If you have any questions, please ask your OneVision distributor or

OneVision GmbH.

Demoversion;¬Limitations of Demonstration Versions

OneVision (Productivity Publishing Environment)
containing
- EPS Import (no conversions)
- Shape Library
- TIFF Import
- Guides
- Shapes
- Register Element
- Sheet Information
- Link Element
- Sound Element

Unlicensed versions of OneVision don't support printing, exporting elements, or converting EPS pages.

Licensing of the OneVision basic system is essential for each of the following modules:

OneVision-Type
Text elements cannot be printed or exported if OneVision-Type is

not licensed.

*OneVision-Image   (containing the Blend Tool, but without
Autotracer and Photogrammetry)*
If OneVision-Image and its modules are not licensed, you cannot
print or export images you have processed . You can load images
into your documents, but you must license OneVision-Image order
to manipulate them.

Interactive Warping
If not licensed, you only can preview modifications to images but
you can't modify the original data.

*OneVision-Art
(containing Pathtext, and Metamorphosis)*
If OneVision-Art is not licensed, elements of these types cannot be
printed or exported.

DigiScript
If DigiScript is loaded but not licensed, OneVision-Image,
OneVision-Art, and the Pathtext tools won't be able to print or save
documents (even if they are licensed themselves).

MultiText
If MultiText is not licensed, its functions cannot be used. You will not

be able to change settings, although existing documents can be loaded.

Bar   Code
If Bar Code is not licensed, the bar code number cannot be changed.

Autotracer (Mono/Color)
If the Autotracer is loaded but not licensed, OneVision-Art won't be able to print or save documents (even if it is licensed itself).

Print Parameters Generator
If this tool isn't licensed, you will be able to create and use print parameters, but you will not be able to save them.

Photogrammetry
If not licensed, this tool can't be used.

Blend Editor
If this is not licensed, you can't change predefined blend colors.

EPS Page Export
If not licensed, this tool won't be able to save data.

TIFF Page Export

If not licensed, this tool won't be able to save data.

Scanner drivers
HP ScanJet II / III / IV
AGFA Arcus
AGFA Horizon
OptoTrade OPTOdrum/Colormax 4000/Crosfield Magnascan,
200i / Howtek D4000

If no scanner driver is licensed, scanned images can't be transferred to documents.

If you have any questions, please contact your OneVision distributor or OneVision GmbH.
