New Page(s)

885442_paste.tiff ¬986172_paste.tiff ¬
This command allows you to add one or more pages to the document.

When you are working on documentpages and click <*New*>,   the *New Page(s)* panel will appear:
271132_paste.tiff ¬
Figure: The New Page(s) panel, demonstrating the command to insert four new pages after the last one

When you are working on masterpages, you can add new masterpages:
paste.tiff ¬
Figure: The New Masterpage(s) panel

You enter how many pages you want add in the left text field.

The switch <*after/before*> allows you to choose whether the new pages should be inserted after or before the page whose number you enter in the text field at the right. If you want to enter new pages after the last page, but don't know what number it is, you can type <*l*> (for last).   <*f*> (for first) will do the same for the first page.

The option <*Assign Masterpage of Current Page*> enables you to automatically assign the masterpage of the current page, if there is one assigned, to all new documentpages. This option isn't shown when creating new masterpages, because you can't assign a

masterpage to a masterpage.

Clicking the *<OK>* button will start adding the new pages. If you click the *<Cancel>* button, no pages will be added.

After adding new pages, the first new page in the document is automatically displayed.

<u>Note</u>: If you have defined and assigned masterpages for even and odd pages, adding an odd number of new pages can cause a loss of data, in the case that you have modified reference elements on the documentpages
(;../../../PageTable/PageTable.rtfd;ReferenzÙnderungen;¬).
