Font Substitution Table Preferences

The Font Substitution Table preferences panel is opened from the main menu. Select *<Info/Preferences>* (;../OneVision/MainMenu/Info/Preferences.rtfd;;¬) and then choose *<Font Substitution Table>* from the pop-up list.

PostScript- and EPS files can use fonts that are neither available on your system nor embedded in the file (;../EPS2Elements/EPS2Elements.rtfd;unknownFont;¬). For these fonts you must select substitutes in a special font panel that offers the option *<Store Selection in Font Substitution Table>*. If this option is checked for a font, the name of the source font and its substitute are stored in the Font Substitution Table.

Source Fonts
In the upper section of the *Preferences* panel you find a selection list displaying all fonts for which a substitute font has been stored.

Remove Entry
This command removes the currently selected entry from the *<Source Fonts>* list.

Substitute Font
This section of the Font Substitution Table shows the substitute font for the currently selected source font.

Select Font
Clicking this button opens the Font Panel in which you can select a new substitute font for the currently selected source font.

Revert / OK
You can revert all changes you've made in the Font Substitution Table with the *<Revert>* button as long as you haven't executed the

<OK> command. Clicking the *<OK>* command saves the current settings. If you added new fonts to the table when converting PostScript files you can remove them all again with *<Revert>*. Quitting OneVision has the same effect as the *<OK>* command
