TMSMultiText.tiff ¬   **MultiText (Writing Directions)**

The MultiText tool enables you to specify the writing direction of text, allowing you to create texts in Hebrew, Arabic, Japanese, Chinese, etc.

<u>Note:</u> This module must be licensed separately. It is not included in the standard Trialog or OV-Type package. If it is not licensed you can't change any settings.

Switching the radio buttons has no effect if no OV-Type element is selected. When selecting an element, its current settings are displayed.

Line Orientation
paste.tiff ¬ or 241447_paste.tiff ¬
With this option you can determine whether the lines of text in the current text frame should be arranged horizontally or vertically.

Writing Direction
891871_paste.tiff ¬ or 710931_paste.tiff ¬
These options specify the writing direction within a line. The options will vary depending on the *<Line Orientation>* settings:
- horizontal line orientation: writing direction can be from left to right or right to left.
- vertical line orientation: writing direction can be from top to bottom

or from bottom to top.

Line Ordering
211663_paste.tiff ¬ or 150278_paste.tiff ¬
<Line Ordering> determines how the lines of text within a text element are ordered, i.e., where new lines are positioned. As with writing direction, two selections are possible, depending on the setting for the line orientation:
- horizontal line orientation: lines can be ordered from top to bottom or from bottom to top.
- vertical line orientation: lines can be ordered from left to right or from right to left.
