Page Layout

paste.tiff ¬

The *<Page Layout>* command allows you to determine the size and orientation of a page.

This panel can also be opened using the keyboard shortcut *Command-Shift-p*.

159001_paste.tiff ¬
Figure: The panel to specify the page layout

For more information on this panel, please refer to your NEXTSTEP User's Reference   (NEXTSTEP   3.2, Chapter 7: Using Applications - The Page Layout Command).

When the page orientation is changed from portrait to landscape or vice versa, you have to specify in an attention panel how to rotate the content of the document pages. You can choose among *<90˚ Left>*, *<90˚ Right>*, and *<Don't Rotate>*

<u>No</u>te: You can not turn single pages but have to turn all pages in the document.
