93812_paste.tiff ¬ **Colors from NEXTSTEP Lists**

Clicking this icon in the color selection panel enables you to select colors from NEXTSTEP lists.

NEXTSTEP provides its own color list as well as two Pantone lists. You can create your own custom lists or buy them from other vendors.

Please refer to your NEXTSTEP User's Reference for a description of using   NEXTSTEP lists. You also will find information on this topic in the electronic manual of the application   ªEditº   (chapter <Working with Color>).

Note: These lists are only available on the system where you created them. Custom NEXTSTEP color lists are not automatically saved with the documents in which they are used. If you want to send such a document to someone else, you must send along with it a copy of the NEXTSTEP list you used. It's a better idea, then, to use OneVision color lists instead, which are saved with the documents they're used in.

Colors from   NEXTSTEP or OneVision lists won't automatically be printed as spot colors. You must explicitly define them as spot colors (;ColorSpot.rtfd;;¬) if you don't want them to be separated as any other color.
