Hilfe;¬Help

paste.tiff ¬

This command opens OneVision's on-line manual. There are
several ways to access on-line help:

1. Click on the help command in the *Info* menu

2. Press the key combinations *Command-Shift-?*.

3. Press the *F1* key. The mouse cursor will change its shape to a
question mark. Clicking on any command or panel will display
relevant help information. If you are using NeXT Hardware, you
have to press both the *Ctrl* and *Alt* keys, because there is no *F1* key.

4. Click the <*Manual*> button in the Module Controller
(;ModuleController.rtfd;;¬).

Once in the help file, you can get additional information about a subject by clicking on the link buttons   (±> ;Help.rtfd;Hilfe;¬) displayed within the text, which represent links to related topics.
