Copy

paste.tiff ¬

The command <*Copy*> creates a copy of the selected element and places its contents in the pasteboard. If there is already something in the pasteboard, it will be deleted.

Note: OneVision elements that have been copied to the pasteboard for pasting them into documents of other applications are converted to EPS format at runtime. After quiting OneVision naturally can't do this conversion anymore. Therefore, if OneVision elements are in the pasteboard when quiting OneVision, you are asked whether you want them to be converted before quiting. Beware, depending on the elements in the pasteboard, this conversion can cause a huge amount of data that might harm your system.
