Document Information

At the top part of every document or page, document and element information is displayed.

805550_paste.tiff ¬

Auto Save

If this option is activated, the document will automatically be saved at regular intervals that you can define in the Preferences (;../MainMenu/Info/Preferences.rtfd;Dokument;¬) panel. For the current document, this option takes precedence over the general Auto Save setting in the main menu's *Preferences* panel.

Preselection

This displays the name and type (;../MainMenu/Element/ElementInspector.rtfd;Typ;¬) of the element which would become selected if the mouse were clicked at its current position. The Element Inspector (;../MainMenu/Element/ElementInspector.rtfd;;¬) displays the name and type of the element that is currently selected.

grouplevel;¬Gruppenlevel;¬Group Level
All elements in a document belong to the group level 0, except they have been created within a group. After you've entered a group you are in group level 1. This group may contain a further group and entering it will get you to group level 2, etc. When grouping groups, or elements that are already members of a group, the appropriate group level is assigned automatically. You can have as many levels as you like. In the information line at the top of the document window you can see on which level you currently are. On the right of the group level information you can see two command icons that enable you to ascend in group levels. Clicking the left of them ascends you one level; the right brings you directly to the top level, i.e., group level 0.
