

## NFSManager

# Select Mount Point panel

4padPointRule2.eps ↵

Use this panel to specify a mount point for an imported directory. It is the point where the directory will appear in the local file system.

This panel appears when you click the Select button in the Imported Directories window.

560028\_PointRule2.eps ↵

Select **/Net** directory if you want to mount the directory automatically when the user first tries to open it.

Select the host name for the client computer here.

**paste.tiff** ↵

Click here to select your own home directory.
