

NetInfoManager

Select NetInfo Domain panel

4padPointRule2.eps ↗

Use this panel to open a the NetInfo domain, to specify the parent domain for a new child, to specify the parent domain for an existing domain you want to turn into a child, or to specify the domain name for a new clone.

This panel appears when you choose the Open command in the Domain menu, or if you click the Select button on the New Child Domain panel, New Clone panel, or Add Existing Domain as Child panel.
