Compendium Deluxe #1 File Archivers Menu

1.1 File Archivers

Filename	Comands	Size	Description
hpack79.lha	VX	159K	HPACK - Multi-System Archiver 0.79a0 - This is an archiver that was written to allow the transfer of archived data to different systems. In the past archivers have been available for single systems only, for example PKZIP and LHARC for the IBM PC, Larc for the Amiga, etc. This is intended to be available on all Computer systems.
lx103.lha	VX	33K	LX 1.03 and LV, 1.01 by Jonathan Forbes - LV is a small, fast, archive viewer; it does not archive or extract files. LX is a fast dearchiver/decompressor. It is compatible with LZ, Lhunarc, Lharc, LharcA, and LhA (Amiga), and Lharc and LHA for MS-DOS.
lzsl0tps.LHA	VX	79K	LZ Shell Version 1.00 By Ernst Paalvast - This is a shell for .lha files, you can extract add etc.
phelp.lha	VX	49K	WS_PackHELP 1.5 by Wolfgang Stellwagen - This is a utility to aid the de-archiving of .lha, .dms etc. programs, it's all in German but looks pretty straight-forward.
unzip2.lha	VX	209K	Zip 2.0.1 and UnZip 5.1d3 - Zip is a directory and file compression and archiving utility. Zip provides a rich set of file management and manipulation commands, including splitting of large archives, selection of compression methods, and wild card inclusion and exclusion features. It is compatible with the PC PKZIP version 2.04g.
