Warning

This program installs a temporary driver while it runs. This means that some of the code runs inside Ring0 along with the kernel. What this means is that if anything goes wrong this program can crash your whole system causing a BSOD in NT or a hanging 95/98. Please do not use kill task to stop DScaler except as a last resort.

In some cases a crash in DScaler can cause disk corruption.

As a precaution sync the disks before running this program. Use the sync utility from http://www.sysinternals.com/ for whichever operating system you are running.

Known Issues

There appear to be crashing problems with

- Norton Anti Virus 2002
- The Timeshift code
- Running some TV programs using WDM drivers after DScaler

Please be especially careful if these apply to you.
