InfoSpy v2.51 (10/26/95)

Installation

To Install: From Program Manager Run A:SETUP
                        You will be asked for your SOURCE directory.
                        You will be asked for your DESTINATION directory.
                        You can customize the initial libraries and the INI path.

   InfoSpy will require 1.1 megabyte on your hard drive
   and there are no memory or configuration requirements.

Registration Information

If you have not yet registered InfoSpy, you can do so with 1 of the following options:

   1.   Send $19.99 to

              Dean Software Design
              P.O. Box 13032
              Mill Creek, WA 98082-1032

   2.   use CompuServe's Online Registration SWREG. (id 1846)

   3.   Use your Visa/MC to order by sending us an EMAIL with your visa info,
             name, address and quantity, or call (206) 316-8645 to place your order.

   4.   Call (206) 316-8645 and leave a voice-mail for further
             purchase options.

You can now specify receiving a REGISTRATION KEY that you can use to instantly change your shareware copy to a registered copy. Otherwise you will recieve a diskette and manual in the mail.

U.S. orders please add $1.00 for postage.
Canadian/Mexican orders please add $2.00 for postage.
Orders from all other countries please add $2.50 for postage.

If you have already registered with us, **THANK YOU**!

What's new in this Version?

Ver 2.51
- Added Option on {\b SPY} menu to lookup local atoms.
- Corrected DLL search on all drives so that it doesn't hang halfway through.
- Enhanced DLL search on all drives to only prompt for drives that exist.
- Added ability to 'Delete' global and local atoms by Double Clicking on the atom in the list. This procedure is restricted to very specific types of atoms, so do not expect it to work globally!
- Added ability for Keyboard Trace to be started automatically when InfoSpy is invoked. Set checkbox on Keyboard Trace Setup window.
- Corrected bug in Task list routine that caused a GPF in certain circumstances.
- Updated System Snapshot so that you can specify a daily time for the snapshot to take place (as well as every x minutes). For example, this would allows users to automatically have a

snapshot done every evening at 9:00pm.

Ver 2.50
- Added new InfoSpy Scheduler program. This 17k program contains all the functionality to perform the InfoSpy program and system event scheduling using the Scheduler DLL.
- New function to get a SYSTEM SNAPSHOT saved to a disk file. The snapshot can be set to happen every x minutes automatically and you can select the file name and optionaly select any of: Running Tasks, Loaded Modules, Open Files, Memory Usage by Task, Memory Information and Heap Information. Each contains comprehensive details.
- Added Registration Key capability. You can now change your shareware version to a registered version by entered a coded Registration Key that you will receive from Dean Software.
- The Setup program now has an UnInstall feature to remove InfoSpy from your system.
- The Setup recognizes the prior use of a registration key so that when new software is installed it will remain registered. It will also detect registered versions of v2.42 that did not use Registration Keys.
- Corrected bug that prevented InfoSpy from starting with a mini status window.
- Added new scheduler option to schedule a job list. Job list allows you to sequence 8 programs to run one after another, each one waiting until the last one is finished before starting. You can place a time limit on each job.
- Updated the scheduler setup window to contain an edit field showing the name of the job list file, thus allowing multiple job files to be maintained.
- Corrected bug in scheduler setup window that did not retain certain settings.
- Corrected bug that would cause InfoSpy to crash or hang with RamDoubler 1.2.
- Added enhanced Windows version recognition for WIndows 95 and Windows NT.
- InfoSpy no longer indicates what operating system it is running on at the top of the main Window, ie: OS/2 or Windows 95.
- The Memory Usage option no longer GPFs on Windows 95, though the memory figures are incorrect or zero due to the 32bit heap usage.
- Corrected bug on Preferences window that did not allow you to change radio button for space seperation on logs.
- Default User ID on Preferences window now specifies 5 characters minimally requied.
- Fixed RESOURCE LEAK in Task List window.
