=====

1. System Requirements:

In order to install and run Claris Home Page 3.0, your computer will need to meet these minimum system requirements:

- Mac OS compatible with 68020 processor or better
- System 7.1 or better
- 8 MB RAM Available
- 5 MB minimum disk space (10 MB during installation)

=====

2. Installation Instructions:

The file named "Claris Home Page Installer" is a self-extracting, single file installer. Double-Click on this file, and follow the on-screen instructions to complete installation.

=====

3. New Features!

Claris Home Page 3.0 is a cross-platform

(Macintosh and Windows) product designed to create powerful Internet Web pages and sites easily. In our latest version, significant effort has been put into supporting the needs of both novice and expert HTML page creators! The New features include:

- ** "Assistants" that automatically generate pages, frames, or complete Web sites based on your style choices, topic, and personalized information!
- ** Strong and accurate HTML processing which can hide or display your custom tags and scripting without altering your work. (Our testing shows that we are superior to all of the competition in HTML processing and custom tag support).
- ** Powerful support for creating FileMaker Pro 4.0 Database Web pages. You can easily connect to your FileMaker Pro 4.0 database, and create custom pages for displaying, searching, editing, or updating database records over the Internet or intranets.
- ** Enhanced site management! New site documents show the entire contents of your site, and allow changing global features such as page background across multiple pages. Easily verify and fix broken links and references, then automatically consolidate all referenced files and upload your site to an Internet service provider.
- ** Searching enhancements! Search and replace text across an entire site from the site editor. Search in Edit HTML Source mode, for example, to globally change references to an image or auxiliary file.
- ** Table enhancements! Define and change background colors or images in individual cells or an entire table. Select multiple cells and apply settings to all of them at once. Span table cells

easily with improved visual feedback.

** Previewing in Multiple Browsers by choosing one or all from the new toolbar!

** Dozens of ready-made Page and site templates for quickly creating professional looking documents and sites.

These powerful program updates and other new features are documented in the "New Features" section of Claris Home Page 3.0 Help.

=====

4. Technical Notes and Tips

A. QuickTime movies for Web pages

QuickTime Movies need to be flattened to play in web browsers. Use the movie player that came with QuickTime to flatten your files. If you don't see the term "flatten," choose "Save as cross platform,"

B. FTP - Working With remote files

Under some conditions, you may need to change the FTP mode that Clarus Home Page uses to communicate with your service provider. If you experience Upload/Download failures of any kind, change the FTP Mode in the FTP Settings dialog box (choose either PASV or Active).

C. Resizing Movie Files

Movie files such as QuickTime VR panorama or AVI may insert very small under some conditions, and must be be resized manually.

D. Inserting AVI files

Insert .AVI files through the Insert Plugin menu item. AVI files will not show in the Insert QuickTime movie dialog.
