## Importing the old C-Organizer databases into C-Organizer Pro v3.x

Since the version 3.0 C-Organizer Professional has a new format of the databases.
The main differences are:
- All C-Organizer information is contained in one file.
- "Tasks List" contains two different modes: "Appointments" and "Tasks".
- The "Alarm" mode was removed and included into the reminder options.
- The "Passwords" mode was added.

Databases are imported the following way:
- All your groups and the single tasks without the End Date in Tasks List will be imported into "Tasks".
- All single tasks which have Begin Date and End Date will be imported into "Appointments".
- All alarms will be converted into Appointments.
- Address Book and Events will be imported into appropriate databases.

## How to import the old databases:

The new version of C-Organizer Professional can detect the old databases automatically if the old version of C-Organizer Professional already installed on your PC. In this case the "Old databases detected" window should be opened. Just click "Yes" button to import the old databases.

As another way you can select "File->Import" main menu item. The "Import" window should be opened. Please select "C-Organizer files v 2.x" Source format. C-Organizer will try to detect the path where the old files are located automatically and put it into Source file. Also you can select the Source file manually. Please click "Browse" button and select file "group.cds".

**Note:** C-Organizer databases include not only "group.cds" file. Please make sure that all C-Organizer files (*.CDS) are located in same folder.

Click "Import" button to import the databases.
