

**TweakAll 2.1 Beta 1
(c) Codeforge, 2001**

READ THIS BEFORE INSTALLING!!

This version of TweakAll has had a large architecture change from previous releases. You will need to download all your plugins again in order for them to work with this release. This change has been made to make this version more stable than previous 2.x releases.

IMPORTANT INFORMATION - PLEASE READ

TweakAll 2.1 can be run alongside TweakAll 1.x and any other tweaking tool (X-Setup, PC-Accelerator 5000, TweakUI etc.)

When you first run TweakAll 2.0, you will be presented with an almost blank screen. TweakAll 2.0 uses plugins to provide all the functionality, and these plugins need to be downloaded. Simply select the 'Check for Updates' feature on the Help menu and download the plugins you require. Once downloaded the plugins will automatically be installed for you. For more information on the plugins used by TweakAll 2.0, please read the 'Plugin Information' section of this readme file. We are sure that once you have become accustomed to the use of plugins, you will agree that they expand the power of TweakAll considerably.

Please note, at the time of this beta release only a limited number of plugins are available. More plugins will be released when they are completed.

THIS IS BETA SOFTWARE

As with all beta software, especially software that makes modifications to your operating system, extreme caution should be used when operating this software.

PLUGIN INFORMATION

TweakAll 2.1 uses a series of specially created plugins, that can be freely downloaded from our web site in one of two ways.

- By using the 'Check for Updates' feature in TweakAll. This has the advantage of showing you all the updates that are available, all the new plugins you can download and any 'engine' updates. These are then downloaded and installed automatically, if you choose to download them.
- By connecting to our web site and downloading the updates from there. This section of our web site is not yet operational at the time of this beta release. You will have to install these updates manually, using the 'Install Updates' feature within TweakAll.

The use of plugins in TweakAll has several advantages over the approach used by more traditional tweaking tools. You can download only the tweaks that you require, for example if you do not have a 3dfx video card you can choose not to download these tweaks. Plugins also enable us to release new tweaks as we develop them, and then these new tweaks can be easily downloaded without having to download the entire TweakAll package again (TweakAll plugins are around 200 kb in size, and are very quick to download). The same is true of updates and bug fixes.

LANGUAGE SUPPORT

TweakAll 2.1 can be converted to different languages. If you are willing to convert TweakAll into any language other than english, then please let us know. Send an e-mail to abton@abtons-shed.com and we will get in touch with you. At present the system in place does not allow for conversion to certain languages, such as arabic, but we are looking into this situation.

WE NEED YOU!

All software can be improved, and this is where you come in. If you have any suggestions please send them to us. We do read all e-mail send to us, and any good suggestions will be implemented. When sending a bug report, or a suggestion for an improvement, please include as much detail as possible.

If you do send a bug report, please be patient while waiting for a reply. We support several products, and it does take time to reply to all the e-mails we receive.

If you send a suggestion we may need to get in touch with you, so please ensure you give us a valid contact e-mail.
