

update install

- monochrome works acceptably
- supports zipped install sets
- * package management

create install sets [BASE at least]

- add help doc for each HTML help version & saved to text, HELP\name.htm & name.en
- add pkg management info to META-INF (or APP-INFO?)
- add LSM to META-INF (maybe APP-INFO)

continue mtools port

update docs with all available ones on fd-doc site, useful technotes, and others, create DOC package for floppies

check new sys with proper order & ensure batch uses correct order

update sys so METAKERN uses std one and METAKERN DUAL does current behavior

check fd bug reports

SOURCE CD

makefiles & try compiling each with openwatcom & fix as needed

WIN

update source cd makefile so also builds Win32 exes, fixheader if needed, upx --8086,

Package (*.FZP)

- zip file just how it should be installed

- APPINFO

*.LSM

*.UPG lists of files,

+"na me" "directory" comment\n keep [or prompt] on upgrade (i.e. a config file), i.e.

don't replace file if exists

-"name" "directory" comment\n remove, only required for files not included, i.e.

generated or from older releases

uninstall: remove all files listed (assumes ones not included are automatically added during install),
if "name" == "" then

delete all files in given directory [add warning?]

install: if file not listed with a + then extract it and add an - entry if not already there, ignore any leading ././ and

ignore with warning any files that start (after any leading ././) with ../

if file has a + then prompt user whether to overwrite or not (add cmd line options to
always overwrite ==force, never==upgrade)
