Before starting

What is a VST plug-in?

A plug-in is a software add-on that provides enhanced capabilities to an host application. A plug-in can't work as a stand-alone program. It must be always accessed from within the host application. Once the plug-in has been installed, it can be called up directly by the appropriate menu in the host application.

VST

VST is the proprietary plug-in architecture developed by Steinberg. As VST audio plug-in, GEQ31V can be used with any program that supports VST 2.0 audio plug-ins. VST audio plug-ins can be used as real-time effects during record or playback, or used to render audio tracks during off-line editing. GEQ31V allows real-time editing and updating of any effect parameter.

System Requirements

Mac

- Any VST 2.0/Mach-O compatible audio host application
- PowerMac G3/300 MHz processor
- MacOS X
- At least 32MB RAM

PC

- Any VST 2.0 audio host application
- 200 MHz Pentium processor or 100% equivalent
- Microsoft Windows 9x/ME/NT4/2000/XP
- At least 32MB RAM

Installation

Mac

Simply run the installer contained in the file you have downloaded.

PC

To use this plug-in, the file *ANWIDA Soft GEQ31Vxxxx.dll* must be copied to the plug-in folder of your VST host. Remember to close all VST audio host applications before doing this. Please see the manual of your VST host program for details.

Demo version limitations

The following restriction applies to the demo version of GEQ31V:

- Audio stream is interrupted every 15 seconds

GEQ31V 31 band – 1/3 octave graphic EQ

Overview

GEQ31V is a professional graphic equalizer available as a VST plug-in for PC and Mac. It enables you to add up to 12 dB of boost or cut at any of 31 bands centered around International Standards Organization (ISO) 1/3 octave frequencies from 20Hz to 20kHz. GEQ31V is an ideal tool for your final master or for the spectral shaping of single tracks. The perspective used in designing GEQ31V was to obtain the warmth of a classic analog device with the clarity and the accuracy of the digital domain processing. This was achieved adopting the best analog equipment's topology.

Main features:

- Extremely transparent action
- 64 bit internal precision
- Highly optimized DSP code
- Ultra clean and noiseless processing
- 24bit/96Khz support
- Factory presets
- Stereo out (mono → stereo, stereo → stereo)

Using GEQ31V

All the effect parameters are accessible and editable using a few number of controls.

- 1 *Gain* sliders: regulate how much you want to amplify or dump the signal in the band of frequency you are considering.
- 2 The display shows the equalizer inner parameters.
- 3 *Gain range* button: controls the range of the gain sliders. When led is off gain range is -12,+12 dB; -6,+6 dB otherwise.
- 4 *Volume* knob: controls the strength of the output signal.

How to order

The full version of GEQ31V can be ordered and instantly downloaded from <http://www.anwida.com>
