

Thank you for trying WAM+[©] version 2.0, we hope that you find it useful. Please check the file called FILELIST.DOC to insure that you have all necessary files.

For a synopsis of the changes since the previous version click on the "Whats New in WAM+ 2.0" icon to see the file "WHATSNEW.WRI". All users of previous versions of WAM+ should read this file as there is important information in the first paragraph.

When evaluating this software please be sure to check out our extensive help/glossary system. In addition to instructions for use of the program there are various tutorials, reference tables, definitions, and interesting facts.

If you have received this program as a zip file (WAM20.ZIP) or a self-extracting file (WAM20.EXE), copy the contents of this file, after extracting it, to a 3.5" diskette or an empty temporary directory on your hard disk. Run SETUP.EXE from the File menu in Program Manager.

This program should be installed using the "setup" program. It will probably not function properly otherwise.

WAM+ was written in C++ using Borland's Object Windows Library.
