Overview

Save It! is used to save text and bitmaps from the clipboard to a .TXT, .BMP, .DIB or .WMF file.   This makes it possible to save text or an image in a format recognized by other Windows programs instead of having to start up another application to paste the data. This is especially useful with bitmaps since just the copied image is saved and can be worked on as a separate smaller picture sized as it was originally cut or copied.

For the fastest most efficient way of saving clipboard data to a file, have **Save It!** already loaded.   Then when you have copied text or a bitmap image to the clipboard, click on the Copy icon on the **Save It!** button bar, then click on the File icon to save the data to a file. The default file name of TEMP and the appropriate file extension for the type of data copied should be already loaded into the File Name box.   The default directory can be set in TC's Setup and Registration.

Note: when you copy data to **Save It!** it is displayed in the box below the button bar.   If the data happens to be text, you can even do minor editing before saving the data to a file.

Help Menu

Contents: Displays the contents of this help file.

Search for Help On: Allows you to search for help on a topic.

Help on Help: Displays the Windows help on help file.

About: Displays copyright and version information.

Registration

For complete information on registration, support, license agreement, Disclaimer of Warranty, Shareware and other important topics, read the help file for <u>Setup and Registration.</u>

File Menu

Copy from Clipboard: Copies the clipboard data to this program.

Save to File: Displays the Save to File dialog box.

Exit: This selection quits the program.
