

Inside the Microsoft Desktop

What Are You Are Going To Hear Today?

Inside the Microsoft® desktop

- Overview of Microsoft's Intranet strategy

- Migration to a 32-bit Windows® Desktop
Operating System

- Deploying 32-bit Windows Desktop to lower
total
cost of ownership

- Redefining desktop applications with Office
97

All slides and referenced tools are

Microsoft Windows

How we are getting there

Microsoft Intranet Framework

Tools

Client operating
system/browser

Server applications and
suites

Server operating system
and infrastructure

Microsoft Intranet Products

Built-in Internet paradigms
Complete:
now and future
Flexible packaging
Integrated for lower administration costs

Microsoft Access, Visual C++, Visual J++, Visual Basic, FrontPage, Internet Studio

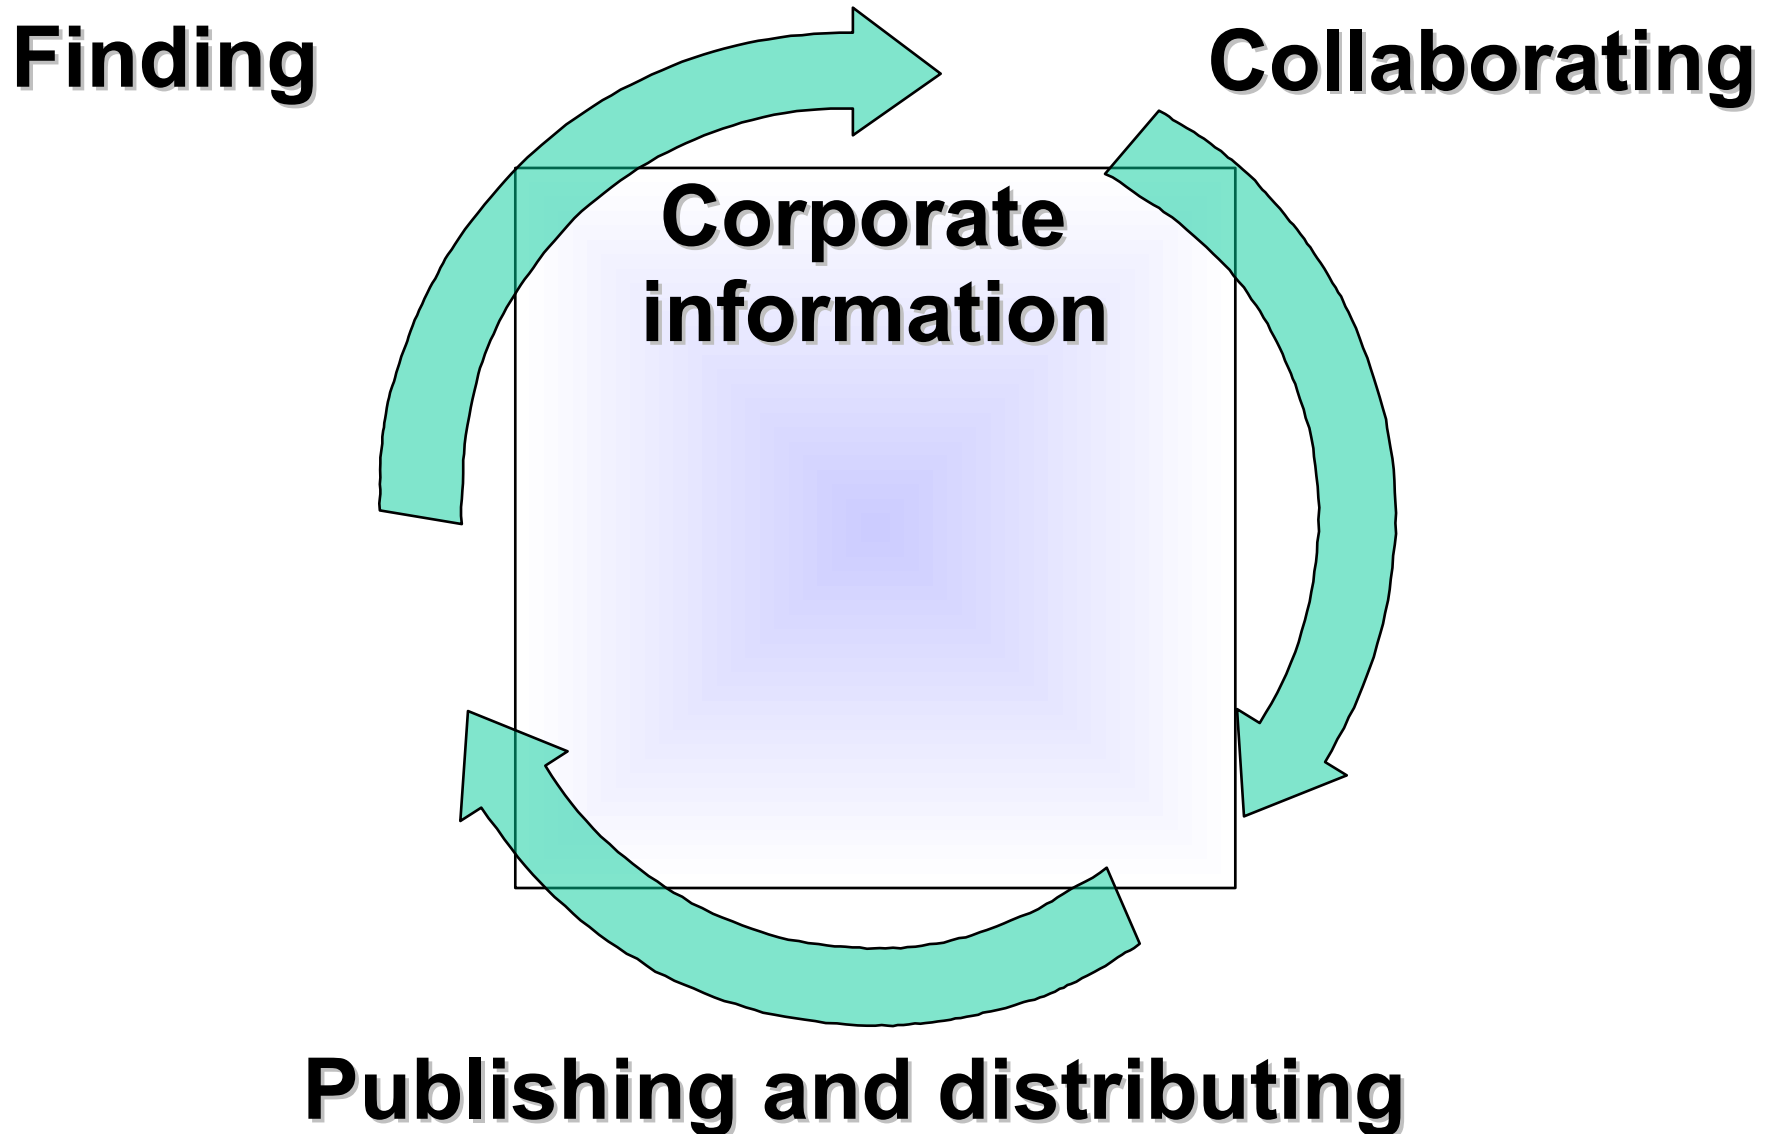

Internet Explorer, Office 97, Windows 95 and Windows NT

Microsoft BackOffice family and "Normandy"

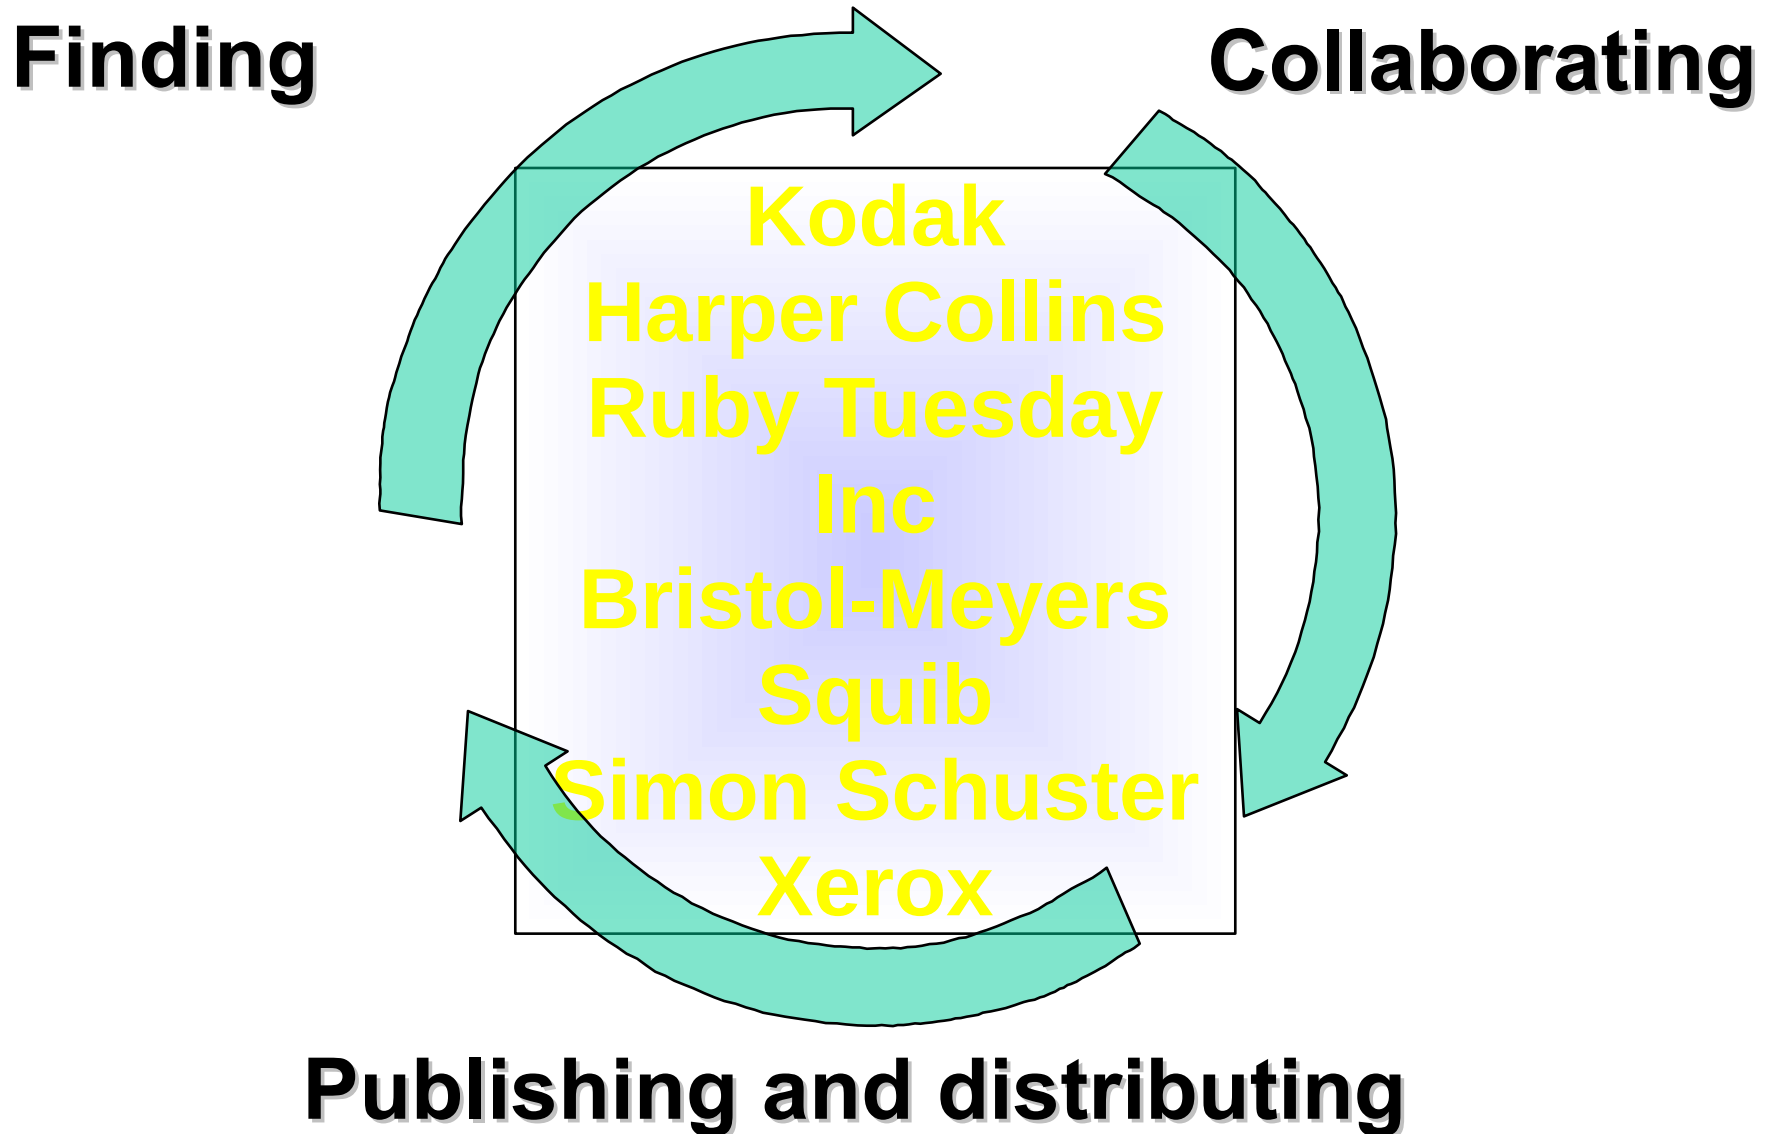

Windows NT Server and Internet Information Server

Information Sharing

Information Sharing

Arcadia Bay

A composite of Microsoft customers

Situational challenges:

- Provide easier access to information
- Multinational company with diverse information sharing needs
- Must leverage existing infrastructure and legacy data
- Must be easy to deploy and administer

Solution:

- Deploy Microsoft Intranet technology to centrally manage information sharing on corporate Intranet

Microsoft's 32-Bit Windows Desktop

Advantages of a 32-bit desktop

Ease of use

Get the newest applications

Great Intranet platform

Greater reliability and manageability

Lower cost of ownership

Windows 95 And Windows NT® Workstation

4.0

Windows 95 is the easiest way to a 32-bit desktop

Lower system requirements (8+ MB)

Easy installation

Optimized for compatibility

Windows NT Workstation is the most powerful

32-bit desktop

Higher system requirements (16+ MB)

High-performance, preemptive multitasking for both

16 and 32-bit applications

Industrial strength reliability and security

Typical Windows Usage

Which to choose?

<http://www.microsoft.com/NTWorkstation/Bestway.htm>

Windows

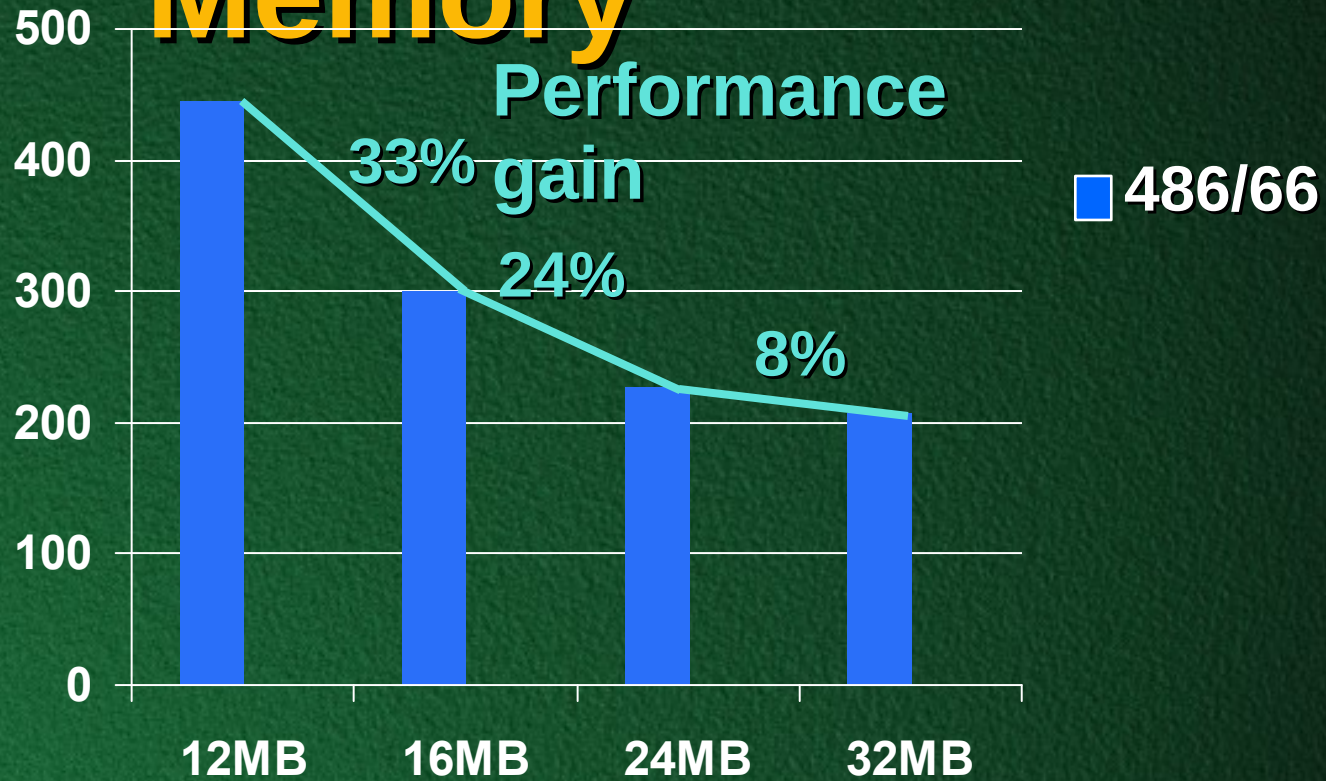

95
Mobile/laptop users
Home users
Gamers
Those with under 16MB
RAM or 110MB free disk
Users needing maximum
MS-DOS® or Windows 3.1
application compatibility
Business desktop

Windows NT

Workstation
Technical Workstations
Developers
Security conscious
Key line of business
applications
Multi-processor or RISC
processor support
Business desktops

Windows NT Workstation Performance Versus Memory

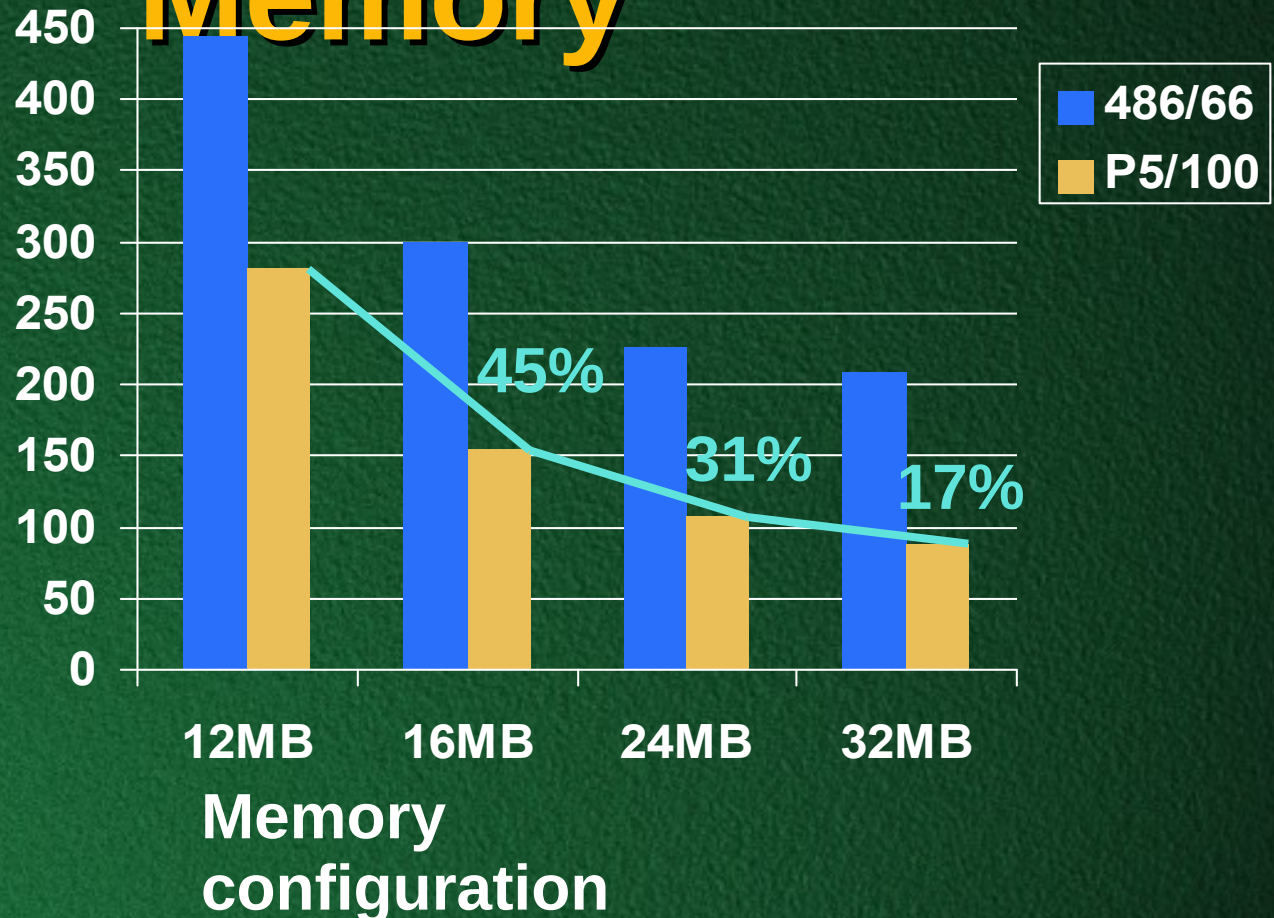

Seconds to
complete
Office for Windows
95
benchmark

486/66 memory sweetspot in 20-24MB range

Windows NT Workstation Performance Versus Memory

Seconds to
complete
Office for Windows
95
benchmark

P5/100 memory sweetspot starts
at 24MB

Example Deployment Strategies

Choosing a business desktop

Adopting Windows 95

DOW Chemical: 26,000 Windows 95

Deloitte and Touche: 15,000 Windows 95

Deploying a mix

Allstate: 100 Windows 95/1,000 Windows NT

**New York DMV: 1,000 Windows 95/500
Windows NT**

Adopting Windows NT Workstation

Intel Corporation: 50,000 Windows NT

Ryder: 300 Windows NT

Windows NT Workstation 4.0

Shared features with Windows 95

Ease of use with new user interface

Internet Explorer for easy access to the Internet

Built-in networking - including support for NetWare[®] Directory Services

Logon script support; supports both 4.x and NDS exploration; authentication; printing; NDS password changing - but no VLM support

Windows NT Workstation 4.0

Subset of functionality in Windows 95

Less autodetection on installation

Lower hardware/software computability

Plug - but no play

No power management

Manual-only hardware profiles

These features coming in Windows NT® 5.0!

Windows NT Workstation 4.0

Superset of functionality in Windows 95

Stronger security

Higher reliability

Greater administrative control

Enhanced Performance Monitor

Windows diagnostics

Remote troubleshooting and control

Faster communication with RAS

Multilink

Peer Web services

Windows NT Workstation Demonstration

Total Cost Of Ownership

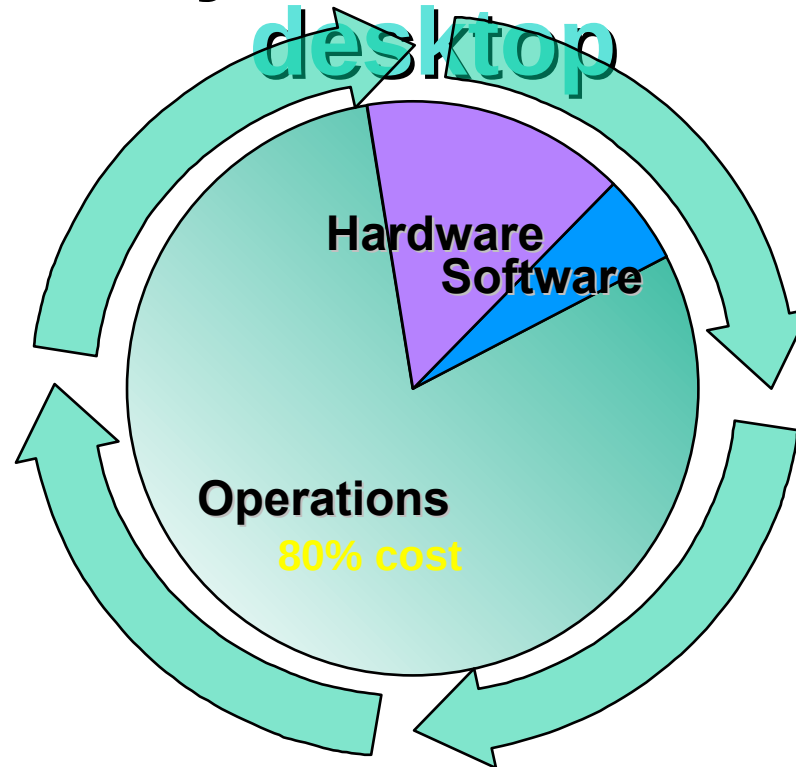

IT lifecycle costs for the desktop

OEM Refresh

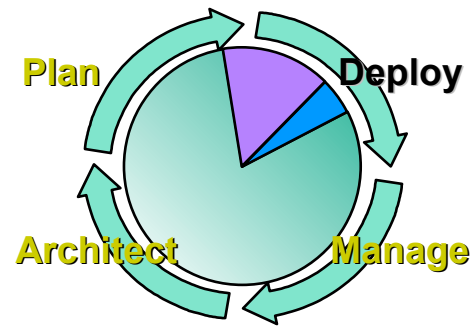

Major Release
Memphis

Common user interface, API

Common driver model

Common core

Architect And Plan

Key considerations

Reduce rollout cost through up-front planning and preparation

Pick one business unit or organization for focused pilot

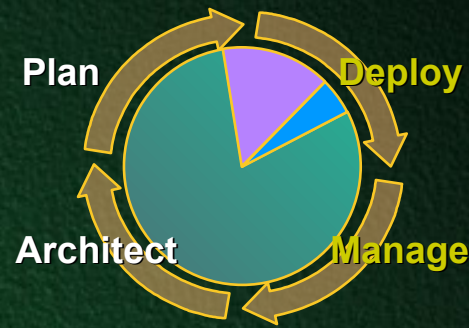

Plan to deploy a mix

Standardize the desktop now

Importance of internal marketing

**No automatic Windows 95 =>
Windows NT upgrade!**

Architect And Plan

Corporate Solutions Pilot (CSP)

120 day free license for all Microsoft desktop and server products (50 clients/two servers)

Conducted with a Microsoft Solution Provider Partner

Corporate Desktop Evaluation (CDE)

120 day free license for desktop products (3 clients only)

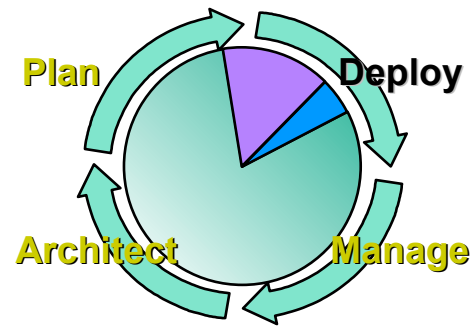

Self-installed evaluation (Microsoft Solution Provider Partner - optional)

CDE Web site at

www.microsoft.com/organizations/corpeval/

Deploy

Key considerations

ATEC training is essential

**Assemble all the Microsoft
deployment tools before you
begin**

**No longer an xcopy as with
Windows® for Workgroups**

Don't depend on users to back up

**Establish “low water mark” system
config**

Deploy

Key considerations

Deployment will likely include

Upgrading and installing memory

Standardizing hardware configs

Formatting the hard drive

Installing a standard set of applications

**Be careful on how much you control
desktop**

**Recommend at least one Windows NT
Server domain to take advantage of
centralized management**

**Evaluate Windows 95 OEM refresh
release**

Deploy

Supporting tools

Support for any installation

Preinstall improvements

Upgrade options

NT Compatibility Tool (NTCT)

**Deployments tools on CDE and
www.microsoft.com**

**Planning guides, project plans, end-user
training kits, sample templates,
Resource Kits,
Tech•Net CD, HCL, Service Packs**

Manage

Key considerations

Install with one Windows NT Server domain

for greatest control over desktop

Integrate with Systems Management Server

for helpdesk

Use Alerts for early problem detection

Look to [\\www.microsoft.com](http://www.microsoft.com) for latest Service Packs

Manage Supporting tools

System policies

User profiles

Intranet Authoring Strategy

Microsoft Office 97 and Microsoft

Create. ~~FrontPage~~ web technology allows easy, flexible creation

Publish. Appropriate format using the tools people know

Collaborate. Powerful collaboration and analysis tools

Manage. Easy visual management of websites

One Tool, Multiple Formats

Office as Web publishing tool

Create and view HTML files in Office

Find, link, navigate HTML or Office files

Use the best format for the situation

HTML: Internet, static navigation pages

**Office: creation, analysis and
collaboration, printing**

Use the best tool for accessing

**Server technology to deliver appropriate
format**

HTML conversion of Office files on the fly

Total Cost Of Ownership

IT lifecycle costs for the desktop

Architect And Plan

Office 97 key

considerations

New Office 97 file formats
New technologies: Visual Basic for Applications,
Microsoft Outlook

Shared components

File compression

Sharing Office documents

Office 97 can read and write older versions

Microsoft Outlook uses same file format as Microsoft
Exchange

File importers for Office 4.x, Office for Windows 95

Viewers and Web for non-Office users

Default File Save-As

Future goal: eliminate file format issues

Deploying Office 97 supporting tools

Support for any installation

Attended and unattended

Local and server-based

Custom installation options

Network Installation Wizard

Office Upgrade Wizard

Support for any distribution method

Manage Office 97 supporting tools

Managing the desktop

- Office system policy templates

- Office run-from-server

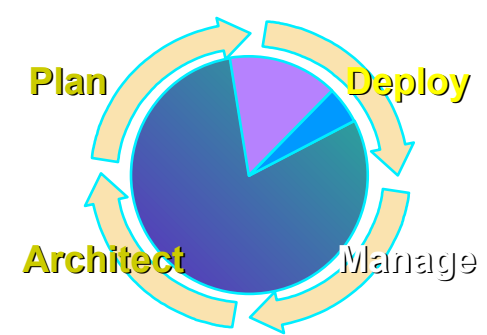

Supporting future upgrades

- New file format architecture

- Intranet-based Office administrative Web site

Manage

Office 97 additional resources

Support

- Office Resource Kit

- Microsoft on the Web

- Office escalation support

Training

- Office Assistant

- Office ATEC courses

- Office certification

- Microsoft Press®

Demonstration

Improved setup,
configuration, and
administration

Windows Desktop Today And Tomorrow

Easiest-to-use

New user interface and
integration between products
increases productivity

Most Integrated with Intranet

Seamless integration minimizes
training and leverages existing
infrastructure

Lowers total cost of ownership

Built in deployment and
management tools ease rollout
and support costs

Microsoft®
