A Division of Computer Ease

DIRECTIONS

The first screen shows every program name and description in the database. This should only have 1 listed after you first install it. To add data to the databases click on EDIT, DATA. A new screen will pop up. Click EDIT, ADD and type in the information. You can find an item on the first/main screen or in the EDIT DATA screen. Note that the find finds the first program that starts with your input string. To find multiple programs with a string try an EDIT, QUERY.

The three buttons on the bottom :

Bugs - Enter the same program name as the one you're editing then fill in the rest of the data. The description is what bug was fixed.

Changes - Enter the same program name as the one you're editing and then put what was changed in the description field.

Tables - For database programmers you can associate tables/files that are used for each program.

TROUBLESHOOTING

If you get an access violation or exception error when doing a query, try downloading the newest BDE drivers from www.borland.com. A link is available from our web site at www.blackboard.cnchost.com.
