

Welcome to Drug Calculations for Nurses V.5

This is just a brief note to inform you about whats new in Version 5.

This version has facilities to keep track of users scores. An individuals progress may be recorded in a text file by adding commands to the file 'dcfile.ini' which may be found in the application directory where Drug Calculations for Nurses is installed.

If you are a teacher or an individual who would like to keep track of your progress over time, please open the file 'dcfile.ini' in notepad for further instructions. There are heaps of new ways you can customise the program.

Registered users are welcome to contact the author for advice on customisation. And please do register.. it provides a small incentive to develop the program further.

For further help read the 'readme.txt' file which accompanied the program or press the 'F1' key for help in the Drug Calculations Program.

I hope you enjoy the new features in this version.
