ADOBE® STREAMLINE® 4.0 TRYOUT READ ME

Adobe Streamline 4.0 instantly converts raster images into editable line art. With Adobe Streamline 4.0 software, you can quickly and easily convert scanned black-and-white or color images into PostScript language line art. You'll save hours over time-consuming manual tracing, and you can take advantage of many flexible and powerful controls that autotrace tools in drawing programs don't provide. Adobe Streamline 4.0 works seamlessly with Adobe Illustrator®, Adobe PageMaker®, and Adobe Photoshop®, so you'll be up and running in no time.

Featuring new posterization controls, Adobe Streamline 4.0 lets you specify custom colors and tints of colors. Or let Streamline choose from an unlimited number of colors. An enhanced tracing engine matches path edges exactly. Improved selection and conversion options let you designate different settings for different areas of the same image. And new post-conversion tools let you smooth paths and make final adjustments to your artwork. With all this flexibility, Adobe Streamline 4.0 offers the most powerful conversion solution for Macintosh and Windows systems.

This tryout will provide you with an opportunity to try the powerful features of Adobe Streamline 4.0. Certain features such as Save, Drag & Drop, and Copy & Paste have been disabled in the tryout version but are in the full version. To begin using Streamline, simply double-click on the Setup.exe application and follow the instructions.

System Requirements:
- 486 or greater processor
- Windows 95, or Windows NT 4.0 or later
- 16MB or RAM
